

DE ROSSI VITTORIANO SRL

DE ROSSI VITTORIANO S.R.L. WILL SHOW AT CONVERFLEX MANY NEWS FOR FLEXO PRINTING UNITS

The company has studied a new system for the GEARLESS MOTORIZATION of the flexo units that eliminates the problems due to a mechanical connection.

De Rossi Vittoriano S.r.l. has been manufacturing printing units and equipment for the labels market for over thirty years. The company's research and improvements in quality have allowed it to maintain the basic principles on which its philosophy is founded: updating and renewal. De Rossi consolidates its experience and know-how by checking projects through all phases from study to the final product. Supported by highly qualified personnel, the company stands out for its highly qualified assistance service. At Converflex De Rossi Vittoriano will propose its latest news:

FLEXO UNITS WITH INDIPENDENT MOTORIZATION

The unit is with closed doctor blade, without ink splash, quick to start and easy to regulate, useful for large production of labels, or inking roller system, quickly to wash, useful for small quantities of labels. The gearless motorization of the flexo units eliminates the problems due to a mechanical connection.

HIGH SPEED FLEXO UNIT with sleeve system with progressive detatching system.

These units are suitable for high production and speed (till to 300 m/min) and are studied in order to speed up the changeover with sleeve system and are installed on reel to reel machines with medium-large size.

COLD FOIL UNIT

This system allows to obtain an excellent quality very similar to hot foil, with the advantages of lower cost, higher speed (up to 120 m/min) and with no stress on material.
