

SEI LASER

SEI S.p.A. = DNA 100 % LASER

*SEI S.p.A. is a world leading company in the development of industrial laser systems. The word Laser is “written” in our DNA. At SEI “Laser” is the most common and widely used word in our company. **SEI is laser.***

At the forthcoming CONVERFLEX 2009 exhibition SEI laser will introduce the latest technology and laser solution for marking, cutting and kiss cutting of printed sheet and roll material. SEI will also introduce further innovations in material processing exploiting laser technology. Several work processes such as die-cutting, bleaching process, kiss-cutting and micro-perforations will be shown on both sheet and roll materials. Sei will demonstrate a range of high tech solutions applicable to both small and large production requirements. “Digital” and “in real time” are key words in today demanding market, where customised items are required at short notice. SEI laser believe the answer to the ever growing demands is not die-making, moulds or templates but the flexible, innovative solutions offered by laser systems. This incredible tool has obvious advantages, unlike the alternatives which are single processes the laser can be thought of as a multi tool system with the advantages of flexibility, speed, accuracy and cleanliness, providing a cost effective production solution. Turn your ideas into reality and start thinking “The Laser Way”.
