

UV RAY S.r.l.

UV RAY, an Italian firm well-known in the industry, designs and produces UV dichroic curing ovens offering advanced solutions for printing. UV RAY will examine any request submitted by manufacturers and users, and propose dedicated installations that are simple to manage and use in order to achieve the best result possible in terms of quality, limiting the costs. The high technology of UV RAY ovens makes it possible to obtain extremely low operating temperatures and a much longer lifetime of the lamp. In addition, there is an immediate saving in terms of power used and machine maintenance, thanks to the complete extractability of the reflectors. The UV RAY systems make productive machines out of those that were unusable up to now due to the lack of profitability.
